The design of Information Transport Systems (ITS), to include conduit and junction box requirements, low voltage wiring, cabling, wireless systems and equipment layout for voice, video and data technologies and networks that do not involve any life safety systems is not considered the practice of engineering as defined in G.S. 89C. However, if held out as an engineering service or as being done by a PE then the work must be signed and sealed and the company must be appropriately licensed with this Board.
